Education

Amrita Vishwa Vidyapeetham

Aug. 2023 – Aug. 2027

Bachelor of Technology, Computer Science and Engineering | CGPA: 8.3/10

Coimbatore, Tamil Nadu

- **Relevant Coursework:** Algorithms & Data Structures, Operating Systems, Distributed Systems, DBMS

Experience

Software Developer Intern | Telesto Energy

Nov. 2025 – Mar. 2026

React.js | Flask | Cloud Storage | Data Visualization

Remote

- Built a full-stack platform on **AWS** and **Azure** for ingesting, storing, and retrieving large binary SEG-Y seismic files in cloud object storage, with interactive in-browser visualizations — reduced access time for a 6GB file from **70 minutes to under 11 minutes** for geoscientist workflows.
- Profiled and optimized the end-to-end data pipeline for throughput and latency; solution met client-defined performance benchmarks and was validated as production-ready through formal client review.
- Followed Agile/Scrum practices with sprint-based delivery cycles, participating in requirement gathering and iterative feature rollout for geoscientist-facing tools.

Full Stack Developer Intern | Sudha Software Solutions

June 2025 – July 2025

Next.js | Node.js | MongoDB | CI/CD

Remote

- Contributed to full-stack feature development across authentication, media storage, and wrote unit and integration tests using Jest as part of the CI/CD pipeline, improving release confidence and catching regressions pre-deployment.
- **Awarded Best Intern** out of the entire cohort; received Experience Letter and Letter of Recommendation.

Projects

Continuum – AI-Powered Parametric Insurance Platform | GitHub | Demo

- Architected a distributed financial ledger on **CockroachDB** to enforce serializable ACID transactions across concurrent UPI payout claims — ensuring consistency under high-throughput, multi-writer conditions.
- Designed a multi-oracle consensus engine that aggregates heterogeneous external data sources (weather, AQI, outage APIs) into fault-tolerant disruption decisions — engineered for graceful degradation under partial failure, with **Kafka** event streaming and **BullMQ** for asynchronous, at-least-once payout orchestration.
- Built a cross-platform **Flutter/Dart** delivery-partner app and a **Next.js** executive dashboard on a shared **FastAPI** backend, syncing real-time payout and event status across mobile and web clients.

Growgle – Agentic AI Career Intelligence Platform | GitHub | Demo

- Built an AI-driven career platform using a RAG pipeline, indexing 4.7M+ tokens for scalable retrieval with personalized insights, resume analysis, and multilingual chat.
- Deployed **Playwright**-based browser automation agents for live news and job-market ingestion, feeding a sentiment analysis layer that continuously refreshes the embeddings driving recommendations.

Pragati 2026 | GitHub | Live

- Selected as part of a handpicked student development team to build and ship the official platform for Amrita School of Business's flagship national B-Fest under the amrita.edu domain.
- Built a **Go** backend managing users, events, registrations, and payment processing, integrated with a React/TypeScript/Vite frontend using TanStack Router.
- Built a full event registration system with integrated payment handling, using Zustand for state management and Zod for schema validation.

Awards & Recognition

- **2nd Place, Guidewire DEVTrails Hackathon** | Selected from 4,400+ teams across 30 universities; mentored by engineers from **EY** and **Guidewire**.
- **Hackathon Winner (x2)** | 1st Place, Build2Break (Rs. 25,000) and Runner-Up, Anokha TechFair 2026 (Rs. 25,000) among 200+ projects, both at Amrita's national techfest.
- **Meta PyTorch OpenEnv Hackathon** | Offline finalist, top 800 of 31,000+ teams; built a custom RL environment and fine-tuned an LLM using GRPO/LoRA.
- **Finalist, Cisco ThingQubator** | Top 10 of 500+ entries for an IoT-based accident detection system.

Technical Skills

Languages: Java, Python, C++, JavaScript/TypeScript

Databases: PostgreSQL, MongoDB, MySQL, CockroachDB

Web & Frameworks: React.js, Next.js, Node.js, Express.js, Spring Boot, Angular

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Git/GitHub

Practices: OOP, Data Structures & Algorithms, Microservices, Agile/Scrum, RESTful APIs
