Education

Amrita Vishwa Vidyapeetham

Aug. 2023 – Aug. 2027

Bachelor of Technology, Computer Science and Engineering | CGPA: 8.3/10

Coimbatore, Tamil Nadu

- **Relevant Coursework:** Algorithms & Data Structures, Operating Systems, Distributed Systems, DBMS

Experience

Software Developer Intern | Telesto Energy

Nov. 2025 – Mar. 2026

React.js | Node.js | Cloud Storage | Data Visualization

Remote

- Built a full-stack platform for ingesting, storing, and retrieving large binary SEG-Y seismic files in cloud object storage — reducing dataset access latency from minutes to seconds for geoscientist workflows.
- Engineered interactive in-browser seismic data visualizations, eliminating dependency on external tools and reducing analysis setup time for client workflows.
- Profiled and optimized the end-to-end data pipeline for throughput and latency; solution met client-defined performance benchmarks and was validated as production-ready through formal client review.

Full Stack Developer Intern | Sudha Software Solutions

June 2025 – July 2025

Next.js | Node.js | MongoDB | CI/CD

Remote

- Designed and deployed 6+ scalable full-stack modules; implemented secure authentication, Cloudinary media storage, and CI/CD pipelines, cutting deployment time by 35%.
- **Awarded Best Intern** out of the entire cohort; received Experience Letter and Letter of Recommendation.

Projects

Continuum – AI-Powered Parametric Insurance Platform | GitHub | Demo

- **2nd Place**, Guidewire DEVTrails Hackathon — selected from 4,400+ competing teams across 30 universities; solution reviewed and mentored by engineers from **EY** and **Guidewire**.
- Architected a distributed financial ledger on **CockroachDB** to enforce serializable ACID transactions across concurrent UPI payout claims — ensuring consistency under high-throughput, multi-writer conditions without sacrificing availability.
- Designed a multi-oracle consensus engine that aggregates heterogeneous external data sources (weather, AQI, outage APIs) into fault-tolerant disruption decisions — engineered for graceful degradation under partial failure, with **Kafka** event streaming and **BullMQ** for asynchronous, at-least-once payout orchestration.

Growgle – Agentic AI Career Intelligence Platform | GitHub | Demo

- **Runner-Up**, Anokha TechFair 2026 among 200+ projects; shortlisted at the **Google GenAI Exchange Hackathon** among thousands of submissions.
- Architected a multi-agent AI system using **Google ADK** on **Vertex AI**, decomposing career intelligence into independently deployable agents — isolating failure domains so no single pipeline failure cascades, enabling horizontal scaling per agent workload.
- Built a retrieval pipeline using **FAISS**-indexed approximate nearest-neighbor search over high-dimensional career embeddings with **LangChain** orchestration — optimized for sub-linear query latency at scale, enabling contextually ranked recommendations without exhaustive similarity computation.

Lab Equipment Management System (LEMS) | Frontend | Backend | Demo

- Adopted in production by Amudha Lab, Amrita Vishwa Vidyapeetham to manage 100+ assets, automating 90% of requests and reducing manual workflow time by 75%.

Awards & Recognition

- **Meta PyTorch OpenEnv Hackathon** | Offline finalist, top 800 of 31,000+ teams — built reinforcement learning environments using **PyTorch** and **Hugging Face Transformers** in a Meta/Hugging Face organized competition.
- **Hackathon Winner (x2)** | 1st Place, Anokha Techfest – built **MedConnect** and survived Build2Break: teams adversarially stress-tested each other's live systems, requiring real-time fault diagnosis and hotfixes under pressure (Rs. 25,000 prize); 2nd Place with Growgle (Rs. 25,000 prize).
- **Finalist, Cisco ThingQubator** | Top 10 of 500+ entries for an IoT-based accident detection system with real-time emergency alerts (Raspberry Pi, ESP32).

Technical Skills

Languages: C, C++, Python, JavaScript, TypeScript, Java, Haskell, SQL

Distributed Systems & Backend: CockroachDB, Kafka, Socket.IO, BullMQ, Docker, PostgreSQL, MongoDB, MySQL, Redis

AI/ML & Data: PyTorch, FAISS, LangChain, Transformers, TensorFlow, Scikit-learn, OpenCV, Google ADK

Web & Frameworks: React.js, Next.js, Node.js, Express.js, FastAPI, Flask, Flutter/Dart

Cloud & DevOps: Vertex AI, Docker, CI/CD, Git/GitHub, Render, Linux (Ubuntu)

Practices: OOP, Microservices, Agile/Scrum, RESTful APIs
